Hybrid Sweet Corn Seed

Grown by

HUNTINGTON BROTHERS

WINDSOR, CONNECTICUT

1959

Hybrid sweet corn seed has been a specialty with us for a number of years and we were among the first to offer this type of seed. Careful breeding has consistently improved the varieties on our list and new ones have been added as their merit has been established. Some of the newer hybrids are of our own origination. The result is a list of varieties of superior characteristics of growth, uniformity, yield and attractiveness. If you have not had our seed before, we suggest you try some in 1959.

The varieties divide themselves into the various recognized seasons of maturity. In the extra early season (and it is the very earliest) there is Improved Spancross. The early season has New Washington, Tunxis and Golden Beauty. The early mid-season variety is Improved Carmelcross. Mid-season hybrids are Golden Queen, Hoosier Gold and Grant. For late mid-season use Golden Cross Bantam and for late season we have added the popular Iochief this year.

By planting, at the same time, at least one variety from each of the seasonal classes and repeating about four weeks later with a variety from the mid-season, late mid-season and late season, a continuous succession of maturity may be obtained. The detailed description of varieties given further on should be an aid in selecting those hybrids most suitable for your needs.

Golden Queen, our newest introduction, deserves special mention. It has a distinctly larger ear and higher eating quality than most hybrids in its season class. Its yield is at least average and when picked it holds its sweetness and tenderness longer. It matures between Improved Carmelcross and Hoosier Gold.

The facilities for producing and handling our crop are among the best and result in a consistently uniform grade of seed of good appearance and always high germination. Many users can vouch for the latter. The crop is carefully screened into uniform grades of flat and round kernels. Large and medium grades of round kernels are made and sold at special discounts. (See price list). Many growers prefer these round kernels, believing they give a more vigorous start to the young seedlings. All seed is treated with a fungicide. The varieties are listed in approximately their order of maturity.

IMPROVED SPANCROSS — Extra Early. Matures nearly a week ahead of all early season varieties. Large yellow-kerneled ears, mostly 12-rowed, 6½-7 inches long and of good quality. Yields well and is quite cold and wilt resistant. Plant 4½-5 feet tall. Outstanding for earliness and size of ear.

TUNXIS — Early. Matures about six days after Imp. Spancross. Developed for its high wilt resistance. Large attractive, light yellow-kerneled ears, 12-rowed, 7-8 inches long. Very good yielder and cold resistant. Plant about 5 feet high.

NEW WASHINGTON — Early. Limited supply this season.

GOLDEN BEAUTY — Early. Matures a day or so after Tunxis. Has excellent eating quality with tender golden yellow kernels. Very uniform ears, 12 to 14-rowed, 7½-8 inches long. A good yielder with considerable cold and wilt resistance. Plant 5½-6 feet tall. A good one to try.

IMPROVED CARMELCROSS — Early Mid-Season. Matures about five days after Golden Beauty. Our strain of this popular hybrid excels in eating quality and yield. Large attractive ears with golden yellow kernels, 12 and 14-rowed, 7½-8 inches long. Thrifty and productive. Plant height 5½-6 feet. One of the best.

GOLDEN QUEEN — Mid-Season. Matures about four days after Imp. Carmelcross. This new hybrid has large attractive yellow-kerneled ears 14 and 16-rowed and about 9 inches long. Plant height 6 feet. Fine eating quality. A good keeper. Highly recommended for those that want a large-eared hybrid of quality and marketability.

HOOSIER GOLD — Mid-Season. Matures soon after Golden Queen. Another hybrid of excellent eating quality but slimmer eared than the above. Sweet and unusually tender yellow-kerneled ears, 12 and 14-rowed, about 9 inches long. Yields well. Plant height 6 feet.

GRANT — Mid-Season. Matures a few days after Hoosier Gold. Our largest hybrid in size. Yellow-kerneled ears 12 to 16-rowed, 8-8½ inches long. Vigorous grower. Plant height 6-7 feet. Sells readily on many markets.

GOLDEN CROSS BANTAM — Late Mid-Season. Matures about five days after Grant. This old standby is still going strong. Golden yellow ears, 12 and 14-rowed, about 8 inches long. Very high eating quality and plant height 5½-6 feet. A fine hybrid.

IOCHIEF — Late Season. Matures five or six days after Golden Cross. Big attractive golden ears, 14 to 20-rowed, 8-9 inches long, with deep narrow kernels of high quality. A fine yielder. Plant height about 6 feet. Widely grown as a main crop variety.

Higher costs are the reason for our first price increase in six years. Prices given below are net per pound. Check or money order to accompany your order. Orders under 20 lbs. will be shipped prepaid to any point in the United States. The purchaser is to pay shipping charges on orders of 20 lbs. or more and should indicate whether the shipment is to be made by express or freight. Please bear in mind that varieties can not be combined to obtain lower prices on the larger unit. Prices below are for flat kernels. Any of the prices quoted may be discounted 4 cents per pound for large round kernels and 6 cents per pound for medium round ones. Take a special discount of 2 cents per pound on orders of 200 lbs. or more.
